

SECRET VERIFICATION NETWORK

White Paper

Introduction

Today, confidentiality remains one of the most important tasks of each user. Unfortunately, Internet surfing reserves a huge number of traces for further user identification.

What it is?

We provide VPN and proxy services that nullify restrictions on content and censorship to provide unlimited access to video, music, social networks and much more from anywhere in the world.

We respect our customers, therefore we do not save or register traffic information, DNS queries or any other data that may be used by intruders.

Benefits:

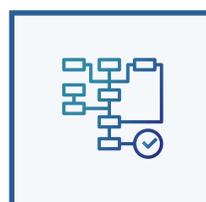

Use a VPN for anonymous browsing.
Choose from over 200 servers
VPN in 93 countries around the world.
Switch as often as you like without
worrying about the leakage of private
information.

Wi-Fi security protection on each
device. Keep privacy and protection
from public Wi-Fi hackers. An
encrypted VPN tunnel prevents
hackers from reading, entering, or
modifying any data on your devices.

Unlock content and sites at the regional
level using a VPN.
Open sites, web services, bypassing
censorship. Browse streaming services
in other regions and get the content
you need when you want it.

Store data in safe and reliable
storage, without losing anonymity,
thanks to innovative Blockchain
technologies.

Token

Token SVN is the basis of user interaction with the system and acts as a commission cost that is charged from each participant in the chain who wants to remain anonymous, and then redistributed between the provider and the server holders.

Key features for site owners:

🔗 SEO Improvement

Search engines can mark your site as dangerous, which will lead to a drop in search rankings. Search engines can also blacklist sites infected with malware. Website security scanners find and fix all website security problems that adversely affect your search engine rankings and track the blacklist of search engines.

🔗 Build customer confidence

Protective trust stamps have been proven to increase customer confidence and therefore have a beneficial effect on conversions. With a daily security scan, the trust seal is updated. Provided that all scans have passed successfully, an icon is displayed notifying that no problems were found.

Key features for site owners:

🔍 Search and fix malware

Search and correction of malicious programs is carried out daily by a security system, the base of which is relevant here and now, because subject to update in real-time, and also keeps in constant synchronization with other nodes of the chain. Scanning includes the search and automatic removal of malware, warnings, and tools to block insecure and unintentional traffic.

Website security combining patent scanning with automated malware removal tools, as well as corporate firewalls protecting your store with a search engine and uninstallations. The SVN system will help its customers protect their sites and online stores. The security algorithm automatically scans and protects the website, daily checking the files, FTP, and network connections for any vulnerabilities or malicious programs. If any malware is detected, SVN removes it immediately, and any other detected vulnerabilities are reported on your dashboard, and you can configure alerts to receive priority notifications. 24/7 support has an excellent team specialized website security consultants who work for your business.

Additional features:

🔗 Backup

A managed website backup service by developers who will back up from start to finish to prevent violations and loss of important non-renewable data.

🔗 Configure backup

The installation of Website backup is supported by specialists, and the process of monitoring website backup itself is transparent and native. You will receive notifications of any changes, and backup copies of the website will begin to be recorded with the possibility of recovery from anywhere in the world.

🔗 Infinite backup storage

You can back up your database and website for up to 90 days (default) or even permanently if you want.

Website Backup focuses on the best means of protecting customer data. Passwords, databases, and website backups are encrypted and secure connections are used if necessary. Annual testing Vulnerabilities are conducted by the support team to check for data breaches or successful hacks. You can back up your database and website for up to 90 days (default) or even permanently if you decide to do it. You can restore your website or database to any previous backup version. Download the content zip file at any time to save your offline backup. To restore, select auto mode.
